

Take your Disinfecting to the next level!

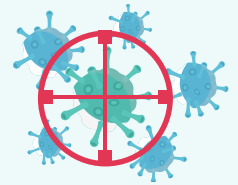

You work hard to create and maintain a safe and healthy environment for your clients and team. Partnering with you, we support and enhance your daily cleaning and disinfecting protocols, and make sure you are complying with those standards. We take your disinfecting and sanitizing practices to the next level.

SurfaceLink90, our *Signature Disinfecting* process is made up of two vital steps utilizing an electrostatic sprayer, which allows extremely small, electrically charged droplets of our eco-friendly disinfectant solution and surface protectant to cover all surfaces, especially the hard to reach areas.

STEP 1

We start with a powerful, non-toxic N-List disinfectant. This thorough approach to disinfecting will cover all of your surfaces and high traffic areas and enhance your team's daily cleaning routine.

STEP 2

Utilizing the same electrostatic spray application, we provide a complete covered layer of a revolutionary surface protectant solution that bonds to any surface while continuously and safely eliminating bacteria and viruses for **90 days or more**.

Although recommended as a monthly service, we will customize our approach to meet your specific needs. We recognize that every business has individual environments and unique protocols. We will work closely with you to design the right plan for your business.

Your Partner in Health Safety

With over 25 years in the field service industry, FirstLink Service Team offers a wide range of customized solutions that focus on equipment testing, preventive maintenance, and sanitization services. With a presence in over 20 states, we partner closely with our customers to ensure they are properly prepared to conduct their business without worry. This is especially impactful during times of safety and health risks.
